DETAILED ACTION

1. This Office action is responsive to the amendment filed 25 May 2006.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claims 1, 5-12, 16, 17, 20-37 and 41-45 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. In claims 1, 5-12, 16, 37 and 41-45, the claimed steps and means are divorced from any tangible structure. In claims 25-36, the claimed medium refers to a transient signal (specification paragraph 1050).

Claim 17 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-16 and 18-45 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed

Art Unit: 2115

invention. In paragraphs 1015 and 1009 of the specification, effective phase shift is described as being based on a MOD operation on an offset value and a GCD value, but not described as being representative of a smallest interval.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1, 5, 10, 17, 18, 25, 33 and 37 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The term "smallest" in claims 1, 10, 18, 25, 33 and 37 is a relative term which renders the claim indefinite. The term "smallest" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The term "smallest" modifies "interval between a reference edge of the first clock and an immediately adjacent reference edge of the second clock signal". It is not clear which two reference edges are being compared.

Claim 5 recites the limitation "determining an edge difference for worst case slack" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim 17 provides for the use of static timing analysis, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.
